Fuel Pump Safety Pressure Switch Instructions

1. Disconnect ground cable from battery.
2. Remove the original equipment oil pressure switch and keep.
3. Apply pipe thread tape to all male pipe thread fittings (male pipe on tee, original oil pressure switch, and oil pressure safety switch).
4. Screw in 1/8” pipe tee into the hole where the pressure switch was removed. Position in a manner to allow the installation of the original pressure switch and the new safety switch.
5. Screw in the two switches.
6. Reconnect the wires to the original equipment oil pressure switch.
7. Wire safety switch as shown below.
8. To complete installation connect the ground battery cable.
